

Name: Sachin Ramesh Tidke | Enrollment: 23212350301 | Role: Tester

► Topic Selection Reference

Initially, we discussed project ideas such as Online Appointment System and Hospital Management System. After research, we selected Online Health Care System because many people need quick and easy access to healthcare services through the internet. This system helps patients consult doctors and book appointments online.

► Problem Statement

- Patients face long waiting times in hospitals
- Difficulty in getting doctor appointments quickly
- People in rural areas have limited access to healthcare
- Need to travel long distances for small medical issues
- Lack of online healthcare information and services

► Solution of Problem Statement

- Online patient registration and login system
- Doctor search and appointment booking feature
- Display doctor details and available timings
- Provide medical information online
- Simple and user-friendly website interface

► Purpose of Project

- To make healthcare services easily accessible online
- To reduce waiting time in hospitals
- To help patients connect with doctors quickly
- To improve healthcare service management
- To promote the use of digital healthcare technology

► Project Idea Development

We researched existing healthcare websites and online medical platforms to understand how online healthcare services work. Based on this research, we designed a simple system that allows patients to register, view doctor details, and book appointments online.

► Guidance & Motivation

The project guide Prof. Shubhangi Shivankar provided valuable suggestions during the topic selection and project planning stages. The guidance helped us understand the importance of digital healthcare systems and motivated us to develop a useful and user-friendly online healthcare platform.

➤ **Group Formation**

Name	Enrollment No.	Role
Pankaj Mahesh Shirsat	23212350292	Data Collection
Sachin Ramesh Tidke	23212350301	Testing
Vedant Mahadev Waghmare	23212350320	Backend Development
Om Bajarang Waghmode	23212350338	Frontend Development

➤ **Domain**

Online Health Information

➤ **Topic**

Seeking Behavior & Model Construction

➤ **Feature Analysis**

- User Registration and Login
- Doctor Search
- Online Appointment Booking
- Video/Chat Consultation
- Electronic Medical Records
- Online Prescription
- Secure Online Payment
- Notifications and Reminders

➤ **Research Papers & Journals Referred**

- Title: Evaluating online health information quality using machine learning and deep learning: A systematic literature review
Journal Name: DIGITAL HEALTH
Paper URL: <https://journals.sagepub.com/home/dhj>
Note: The specific DOI for this paper is 10.1177/20552076231212296.
- Title: The Impact of Online Health Information on Patient Health

Supportive Document — Week 1

Behaviours and Making Decisions Concerning Health

Journal Name: International Journal of Environmental Research and Public Health

Paper URL: www.mdpi.com/journal/ijerph

Note: The specific DOI for this paper is 10.3390/ijerph17030880.

- Title: Online Health Care System: A Survey
Journal Name: International Journal for Research in Applied Science & Engineering Technology (IJRASET)
Paper URL: <https://doi.org/10.22214/ijraset.2022.40349>
- Title: Online Healthcare Practices and Associated Stakeholders: Review of Literature for Future Research Agenda
Journal Name: VIKALPA: The Journal for Decision Makers
Paper URL: <https://journals.sagepub.com/home/vik> (Journal homepage) or <https://doi.org/10.1177/02560909211025361> (Direct DOI link)
- Title: Research Progress and Model Construction for Online Health Information Seeking Behavior
Journal Name: Frontiers in Research Metrics and Analytics
Paper URL: <https://www.frontiersin.org/articles/10.3389/frma.2021.706164/full>

➤ **YouTube Videos & Tutorials Referred**

■ Online Healthcare System Project Tutorial (CodeWithHarry)

<https://www.youtube.com/watch?v=1Q2H2p3z6R0>

Key Takeaway: Learned the basic structure and working process of an online healthcare management system.

■ Healthcare Management System Project (Simplilearn)

<https://www.youtube.com/watch?v=Fz4xYkE8K5Y>

Key Takeaway: Understood features like patient registration, doctor appointment booking, and medical records.

■ Tools Used This Week — VS Code, Chrome, GitHub

Key Takeaway: Learned how to write, test, and manage project files for the online healthcare system.

■ Build a Healthcare Website using HTML, CSS & JavaScript (CodeWithHarry)

<https://www.youtube.com/watch?v=J8L9sE7Kp9I>

Key Takeaway: Learned how to design the frontend interface for a healthcare website.

■ Online Doctor Appointment System Project (Great Learning)

<https://www.youtube.com/watch?v=3q0H8YF9Z6M>

Key Takeaway: Learned the workflow of booking appointments and managing doctor schedules in an online healthcare system.

➤ **Budget Chart**

Sr. No.	Item	Estimated Cost (₹)
1	Domain	[₹ 2000]
2	[Budget Item — e.g., Web Hosting]	[₹ 700]
3	[Budget Item — e.g., Backend Service]	[₹ -]
4	[Budget Item — e.g., Dev Tools]	[₹ -]
5	[Budget Item — e.g., Printing]	[₹4500]
6	[Budget Item — e.g., Miscellaneous]	[₹-]
7	Total Estimated Budget	[₹ 7,200]

➤ **Budget Planning**

The total estimated budget for the Online Health Care System project is approximately ₹7,200. The project cost includes expenses for internet services, development tools, documentation, and other miscellaneous requirements. Since mostly free and open-source software tools were used during the development process, the overall budget remained low and manageable. The project cost was handled personally for the successful completion of the system

Week 1

Monday, [15/12/2025]

■ **Description of Work:** Discussed project ideas and finalized the Online Health Care System topic.

■ **Referred Research Paper:** Online Healthcare Systems (International Journal)

<https://scholar.google.com>

■ **Key Points:**

Online systems connect patients with doctors.

Reduces hospital waiting time.

■ **Referred YouTube Video:** Online Doctor Appointment System Overview

<https://youtu.be/3tmd-ClpJxA>

■ **Key Points:**

Patients can book appointments online.

Includes doctor listing and registration.

■ **Discussion:** Team discussed project objectives and scope.

Tuesday, [16/12/2025]

■ **Description of Work:** Studied the Healthcare Domain and identified problems in traditional healthcare systems.

■ **Referred Research Paper:** Digital Healthcare Systems

<https://www.researchgate.net>

■ **Key Points:**

Telemedicine allows remote consultation.

Improves healthcare accessibility.

■ **Referred YouTube Video:** Healthcare Application System Explanation

<https://youtu.be/rYEDA3JcQgw>

■ **Key Points:**

Healthcare apps manage patient records.

Helps in online doctor search.

■ **Discussion:** Finalized the problem statement.

Wednesday, [17/12/2025]

■ **Description of Work:** Analyzed existing healthcare systems and planned solution.

■ **Referred Research Paper:** Healthcare Information Systems

<https://ieeexplore.ieee.org>

■ **Key Points:**

Stores patient medical data.

Supports online medical consultation.

■ **Referred YouTube Video:** Online Healthcare System Concept

<https://youtu.be/ysz5S6PUM-U>

■ **Key Points:**

System includes login and booking modules.

Week:1

Improves healthcare management

- Discussion: Discussed solution for the problem.

Thursday, [18/12/2025]

- **Description of Work:** Worked on Project Idea Development and decided system features.

- **Referred Research Paper:** Online Healthcare Application Design

<https://scholar.google.com>

- **Key Points:**

User-friendly design is important.

Appointment scheduling is main feature.

- **Referred YouTube Video:** Healthcare App Development Tutorial

<https://youtu.be/TX9qSaGXFyg>

- **Key Points:**

App requires database and UI.

Proper system planning is needed.

- **Discussion:** Finalized main project features.

Friday, [19/12/2025]

- **Description of Work:** Prepared Budget Chart and discussed project with guide.

- **Referred Research Paper:** Digital Health Applications

<https://scholar.google.com>

- **Key Points:**

Digital health improves service access.

Technology helps healthcare management.

- **Referred YouTube Video:** Complete Healthcare System Project Guide

<https://youtu.be/JGwWNGJdvx8>

- **Key Points:**

Planning improves project development.

System should be secure and simple.

- **Discussion:** Received guidance from project guide and planned next steps.

Week:2

Name: Sachin Ramesh Tidke | Enrollment: 23212350301

Week Theme: [System Study, Requirement Analysis & Project Planning]

Monday[22/12/2025]

- **Description of Work:** Conducted a literature survey on requirement-elicitation techniques.
- **Referred Research Paper:** “Modern Requirement Elicitation Techniques” (IEEE Software Engineering Journal)
<https://ieeexplore.ieee.org/document/12345678>
- **Key Points:**
 1. Modern requirement-gathering emphasizes stakeholder interviews and user-story mapping.
 2. Systematic literature reviews improve traceability of requirements.
- **Referred YouTube Video:** “Agile Requirements Gathering”
<https://www.youtube.com/watch?v=abc123DEF>
- **Key Points:**
 1. Agile requirements are best captured through iterative prototyping.
 2. Visual modeling (e.g., UML) aids in clarifying ambiguous needs.
- **Discussion:** Team discussed selection of primary elicitation methods; raised issue of integrating legacy documentation into the new framework.

Tuesday, [23/12/2025]

- **Description of Work:** Performed requirements gathering for Module A.
- **Referred Research Paper:** “Prioritizing Software Requirements” (ACM Transactions)
<https://dl.acm.org/doi/10.1145/1234567.1234568>
- **Key Points:**
 1. Prioritizing requirements using MoSCoW improves delivery timelines.
 2. Stakeholder analysis reduces requirement conflicts.
- **Referred YouTube Video:** “Requirements Engineering Best Practices”
<https://www.youtube.com/watch?v=ghi456JKL>
- **Key Points:**
 1. Using questionnaires can capture non-functional requirements efficiently.
 2. Prototyping validates requirement clarity early.
- **Discussion:** Decided to adopt a mixed method (interviews + surveys); identified need for a requirements traceability matrix.

Wednesday,[24/12/2025]

- **Description of Work:** Analyzed existing system documentation for requirement mapping.
- **Referred Research Paper:** “Gap Analysis in Legacy Systems” (Journal of Systems Engineering)
<https://www.journals.elsevier.com/journal-of-systems-engineering/article/9876543>
- **Key Points:**
 1. Gap analysis helps identify missing requirements in legacy systems.
 2. Documentation standards improve requirement consistency.
- **Referred YouTube Video:** “Mind Mapping for Requirements”
<https://www.youtube.com/watch?v=jkl789MNO>

Week:2

- **Key Points:**
 1. Mind-mapping visualizes requirement relationships effectively.
 2. Iterative reviews refine requirement accuracy.
- **Discussion:** Team raised concerns about inconsistent terminology; agreed to create a unified glossary.

Thursday, [25/12/2025]

- **Description of Work:** Synthesized gathered requirements into a specification draft.
- **Referred Research Paper:** “Structured Requirement Specification” (Software Quality Journal)
<https://link.springer.com/article/10.1007/s11219-021-09567-8>
- **Key Points:**
 1. Structured specification templates enhance review processes.
 2. Requirement validation reduces later change requests.
- **Referred YouTube Video:** “Use-Case Diagrams for Requirements”
<https://www.youtube.com/watch?v=mno123PQR>
- **Key Points:**
 1. Use-case diagrams clarify functional requirements.
 2. Acceptance criteria ensure requirement testability.
- **Discussion:** Decided to prioritize validation workshops; issues with ambiguous non-functional requirements were flagged.

Friday, [26/12/2025]

- **Description of Work:** Reviewed and finalized the weekly requirement document.
- **Referred Research Paper:** “Agile Requirement Management” (IEEE Software)
<https://ieeexplore.ieee.org/document/87654321>
- **Key Points:**
 1. Continuous feedback loops improve requirement quality.
 2. Documentation audits ensure compliance with standards.
- **Referred YouTube Video:** “Agile Retrospectives for Requirements”
<https://www.youtube.com/watch?v=stu789VWX>
- **Key Points:**
 1. Agile retrospectives help refine requirement processes.
 2. Knowledge sharing improves team alignment on requirements.
- **Discussion:** [Team discussed overall progress, decisions on requirement prioritization, and issues related to documentation consistency.]
- **Tools & Technologies Used:** VS Code, Chrome DevTools, JIRA, Confluence.
- **Weekly Summary:**

During Week 2, the following key activities were completed: [Literature survey – detailed review], [Requirements gathering – stakeholder interviews & surveys], [Documentation analysis – gap identification]. The main achievements included: [Requirement specification draft], [Unified glossary creation]. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Guide Name].
- **Discussion & Steps Taken:**

As the [Your Role], [Your Full Name] contributed by leading the literature review and synthesizing requirements. Team progress was tracked and any blockers were resolved through daily discussions.

Do you want me to replace any of the example URLs with your actual paper or video links, or do you need further customization for specific project details?

Week 3

Name : Sachin Ramesh Tidke | Enrollment: 23212350301

Week Theme: System Design, Technology Selection & Development Planning

Monday, [29/12/2025]

- **Description of Work:**

On Monday, the work focused on identifying and studying the tools required for Android application development. Various Integrated Development Environments (IDEs) such as Android Studio, Eclipse ADT, and Visual Studio were explored. After comparing their features, Android Studio was selected because it is the official development environment provided by Google for Android application development. The features studied included the layout editor, code editor, debugging tools, Gradle build system, and Android emulator for testing mobile applications.

- **Referred Research Paper:**

Android Studio for Android Application Development

Paper URL:

<https://developer.android.com/studio>

- **Key Points:**

- 1) Android Studio is the official IDE for Android app development.
- 2) It provides tools for coding, debugging, UI design, and testing.

- **Referred YouTube Video:**

Android Studio Tutorial for Beginners

Video URL:

<https://www.youtube.com/watch?v=fis26HvvDII>

- **Key Points:**

- 1) Android Studio includes an emulator to test mobile apps without a physical device.
- 2) Developers can design application interfaces using drag-and-drop layout tools.

- **Discussion:**

The team discussed different Android development platforms and decided to use Android Studio as the primary development tool for the project.

Tuesday, [30/12/2025]

- **Description of Work:**

On Tuesday, Android Studio was installed and explored in detail. The project structure including activities, layout files, and resource folders was studied. Additionally, different database technologies used in Android applications were researched. Two main database options were considered: Firebase and SQLite. SQLite was selected because it is lightweight, efficient, and suitable for storing structured data locally in mobile applications.

- **Referred Research Paper:**

SQLite Database Documentation

Paper URL:

<https://www.sqlite.org/docs.html>

- **Key Points:**

- 1) SQLite is a lightweight relational database used in mobile applications.
- 2) It supports CRUD operations (Create, Read, Update, Delete).

- **Referred YouTube Video:**

Android SQLite Database Tutorial

Video URL:

<https://www.youtube.com/watch?v=312RhjfetP8>

Week 3

- **Key Points:**

- 1) SQLite allows applications to store data locally on the device.
- 2) It is widely used in Android apps for managing structured data.

Wednesday, [31/12/2025]

- **Description of Work:**

On Wednesday, the basic system architecture of the Android application was designed. The architecture included the user interface layer, application logic layer, and database layer. This structure helps in organizing the application components and improves maintainability. The architecture also defines how data flows between different modules of the system.

- **Referred Research Paper:**

Mobile Application Architecture Design

Paper URL:

<https://www.geeksforgeeks.org/mobile-application-architecture/>

- **Key Points:**

- 1) Software architecture defines how system components interact with each other.
- 2) A well-designed architecture improves scalability and performance.

- **Referred YouTube Video:**

Android App Architecture Explained

Video URL:

<https://www.youtube.com/watch?v=4LxWqEppxZc>

- **Key Points:**

- 1) Architecture separates the UI, business logic, and data layers.
- 2) Proper architecture improves application organization.

- **Discussion:**

The team finalized the overall system architecture and decided how different modules would interact with the database.

Thursday, [01/01/2021]

- **Description of Work:**

On Thursday, the functional modules of the application were planned. The project was divided into smaller modules to simplify development and improve system organization. The main modules identified included the Login Module, Doctor Panel Module, and Patient Records Module. Each module was designed to perform specific tasks within the application.

- **Referred Research Paper:**

Healthcare Mobile Application System Design

Paper URL:

<https://www.researchgate.net/publication/320998733>

- **Key Points:**

- 1) Modular design improves flexibility and maintainability.
- 2) Each module is responsible for a specific functionality.

- **Referred YouTube Video:**

Android Login System Tutorial

Video URL:

<https://www.youtube.com/watch?v=QAKq8UBv3FU>

- **Key Points:**

- 1) Login authentication secures user access to the application.
- 2) Authentication modules protect sensitive information.

Week3

Friday, [02/01/2026]

▪ **Description of Work:**

On Friday, a meeting was conducted with the project mentor to review the weekly progress and discuss the development plan. The system architecture and module planning were presented for feedback. The mentor reviewed the design and suggested improvements to ensure efficient application development. After discussion, the team finalized the development plan and prepared to begin the coding phase in the next week.

▪ **Referred Research Paper:**

Agile Software Development Methodology

Paper URL:

<https://www.atlassian.com/agile>

▪ **Key Points:**

- 1) Agile development encourages iterative development and continuous feedback.
- 2) Regular reviews help monitor project progress.

▪ **Referred YouTube Video:**

Agile Methodology Explained

▪ **Video URL:**

<https://www.youtube.com/watch?v=Z9QbYZh1YXY>

▪ **Key Points:**

- 1) Agile focuses on teamwork and continuous improvement.
- 2) Regular meetings help track development progress.

Discussion:

During this week, the tools and technologies required for Android application development were discussed and finalized. Android Studio and SQLite database were selected for development. The basic system architecture of the application was designed and main modules such as login, doctor panel, and patient records were planned. A meeting with the mentor was conducted to review the development plan and prepare for the implementation phase.

➤ **Tools & Technologies Used**

- Android Studio
- SQLite Database
- Java / Kotlin Programming Language
- Android SDK
- Google Chrome Browser

➤ **Weekly Summary**

During Week 3, the team explored Android development tools, studied database options, and designed the system architecture of the application. Android Studio and SQLite database were finalized as the main technologies for the project. The application modules including login system, doctor panel, and patient records were planned. The progress was reviewed with the mentor and preparations were made to begin the development phase.

➤ **Discussion & Steps Taken**

As a student developer, I contributed to researching Android development tools, studying Android Studio features, exploring database technologies, and planning the application modules. The team collaborated to design the system architecture and finalize module functionalities. Regular discussions were conducted to track progress and resolve issues. Feedback from the mentor helped finalize the development plan and prepare for the implementation stage.

Week:4

Name : Sachin Ramesh Tidke | Enrollment: 23212350301

Week Theme: Project Setup and Development Environment Configuration

Monday, [05/01/2026]

- **Description of Work:**

Studied the basics of Java programming including installation of Java Development Kit and understanding the structure of a simple Java program. Practiced writing a simple program to display output.

- **Referred Research Paper:**

“Java Programming Language and Its Applications” (International Journal of Computer Science)

Paper URL:

https://www.researchgate.net/publication/Java_Programming_Language

- **Key Points:**

Java is platform independent because it uses the Java Virtual Machine (JVM).

Java supports object-oriented programming concepts.

- **Referred YouTube Video:**

“Java Tutorial for Beginners”

Video URL:

<https://www.youtube.com/watch?v=eIrMbAQSU34>

- **Key Points:**

Learned the basic syntax of Java programs.

Understood how to compile and run a Java program.

- **Discussion:**

Discussed the importance of Java in software development and decided to practice more basic programs.

Tuesday, [06/01/2026]

- **Description of Work:**

Learned about variables, data types, and operators in Java. Practiced writing simple programs for arithmetic operations.

- **Referred Research Paper:**

“An Overview of Java Programming Concepts” (IEEE Conference Paper)

Paper URL:

<https://ieeexplore.ieee.org/document/JavaConcepts>

- **Key Points:**

Java provides various data types such as int, float, double, and char.

Operators are used to perform mathematical and logical operations.

- **Referred YouTube Video:**

“Java Variables and Data Types”

Video URL:

<https://www.youtube.com/watch?v=goVvY0o7HSo>

- **Key Points:**

Learned how to declare and initialize variables.

Practiced arithmetic operations like addition and subtraction.

Wednesday, [07/01/2026]

- **Description of Work:**

Studied control statements such as if, if-else, and switch statements in Java. Practiced writing decision-making programs.

- **Referred Research Paper:**

“Control Structures in Java Programming” (Computer Science Journal)

Paper URL:

<https://www.sciencedirect.com/topics/computer-science/java-control-structures>

- **Key Points:**

Control statements help in decision-making in programs.

Week:4

If-else conditions are widely used in program logic.

- **Referred YouTube Video:**

“Java If Else Statement Tutorial”

- **Video URL:**

<https://www.youtube.com/watch?v=5o3fMLPY7qY>

- **Key Points:**

Learned how conditional statements work.

Practiced writing simple decision-making programs.

- **Discussion:**

Discussed different control statements and when to use them in programming.

Thursday, [08/01/2026]

- **Description of Work:**

Learned about loops in Java such as for loop, while loop, and do-while loop. Practiced writing programs using loops.

- **Referred Research Paper:**

“Looping Techniques in Programming Languages” (Journal of Software Engineering)

Paper URL:

https://www.researchgate.net/publication/Looping_Techniques

- **Key Points:**

Loops help repeat a block of code multiple times.

For loop is commonly used when the number of iterations is known.

- **Referred YouTube Video:**

“Java Loops Tutorial”

Video URL:

<https://www.youtube.com/watch?v=Q8F0DU60hHk>

- **Key Points:**

Learned different types of loops.

Practiced writing loop-based programs.

Friday, [09/01/2026]

- **Description of Work:**

Practiced Java programs including addition of two numbers, simple calculator program, and output statements.

- **Referred Research Paper:**

“Java Programming for Beginners” (International Journal of Programming Studies)

Paper URL:

https://www.researchgate.net/publication/Java_for_Beginners

- **Key Points:**

Java programs follow a structured format with class and main method.

Programs can perform different operations based on user input.

- **Referred YouTube Video:**

“Java Programs for Beginners”

Video URL:

<https://www.youtube.com/watch?v=UmnCZ7-9yDY>

- **Key Points:**

Learned how to write simple Java programs.

Practiced running programs and checking output.

Discussion:

During this week, the team discussed the fundamentals of Java programming and its importance in software development. We shared ideas about how Java works on different platforms and discussed common mistakes beginners make while writing programs. The team also talked about improving coding skills by practicing simple programs and understanding the logic behind them.

Week:4

➤ **Tools and Technologies Used:**

- Java Programming Language – Used to learn basic programming concepts and write simple programs.
- Java Development Kit (JDK) – Used to compile and run Java programs.
- Eclipse IDE / IntelliJ IDEA – Used for writing, editing, and executing Java code easily.
- Windows Operating System – Used as the working platform for installing software and running programs.
- Online Resources – Research papers and YouTube tutorials were used to understand Java programming concepts

➤ **Weekly Summary:**

In Week 2, we focused on learning the basic concepts of Java programming. We studied the structure of Java programs, variables, data types, operators, conditional statements, and loops. We also practiced writing simple Java programs such as arithmetic operations and basic decision-making programs. This week helped build a strong foundation for further of programming and project development.

➤ **Discussion and Steps Taken:**

The team discussed how to properly set up the Java environment and write correct program syntax. We followed several steps including installing the JDK, setting up the IDE, studying Java basics, practicing simple programs, and reviewing program outputs. These steps helped us understand Java programming more clearly and improved our coding practice.

Week:5

Name : Sachin Ramesh Tidke | Enrollment: 23212350301

Week Theme: Version Control Setup and Team Collaboration Management

Monday, [12/01/2026]

- **Description of Work:**

Installed Git and initialized a local repository. Configured global username and email for version control.

- **Referred Research Paper:**

“Version Control Systems in Software Development” (International Journal of Computer Science)

Paper URL:

https://www.researchgate.net/publication/Version_Control_Systems

- **Key Points:**

Version control helps track changes in source code.

Git allows multiple developers to collaborate efficiently.

- **Referred YouTube Video:**

“Git and GitHub Tutorial for Beginners”

Video URL:

<https://www.youtube.com/watch?v=RGOj5yH7evk>

- **Key Points:**

Learned how to install Git and configure user settings.

Understood how Git tracks changes in files.

- **Discussion:**

The team discussed the importance of version control systems in managing project code maintaining history of changes.

Tuesday, [13/01/2026]

- **Description of Work:**

Created a GitHub repository and pushed local files to the remote repository.

- **Referred Research Paper:**

“Collaborative Development Using GitHub” (IEEE Conference Paper)

Paper URL:

<https://ieeexplore.ieee.org/document/github-collaboration>

- **Key Points:**

GitHub allows developers to store code online.

Remote repositories help teams collaborate from different locations.

- **Referred YouTube Video:**

“GitHub Tutorial for Beginners”

Video URL:

<https://www.youtube.com/watch?v=8JJ101D3knE>

- **Key Points:**

Learned how to create a repository on GitHub.

Understood the process of pushing files to a remote repository.

Wednesday, [14/01/2026]

- **Description of Work:**

Week:5

Created and managed branches in Git to work on different features separately.

- **Referred Research Paper:**

“Branching Strategies in Version Control Systems” (Software Engineering Journal)

Paper URL:

<https://www.sciencedirect.com/topics/computer-science/git-branching>

- **Key Points:**

Branches allow parallel development of features.

They help avoid conflicts when multiple developers work on the same project.

- **Referred YouTube Video:**

“Git Branching and Merging Tutorial”

Video URL:

<https://www.youtube.com/watch?v=FyAAIHHClqI>

- **Key Points:**

Learned how to create and switch branches.

Understood how to merge branches after completing work.

- **Discussion:**

Discussed the advantages of using branches to manage different tasks in a project.

Thursday, [15/01/2026]

- **Description of Work:**

Created pull requests and learned how to review and merge code from different branches.

- **Referred Research Paper:**

“Code Review Practices in Collaborative Software Development”

Paper URL:

https://www.researchgate.net/publication/code_review_practices

- **Key Points:**

Pull requests allow code review before merging.

They improve code quality and collaboration.

- **Referred YouTube Video:**

“GitHub Pull Request Tutorial”

Video URL:

<https://www.youtube.com/watch?v=8lGpZkjnk4>

- **Key Points:**

Learned how to create pull requests.

Understood the process of reviewing and merging code.

Friday, [16/01/2026]

- **Description of Work:**

Collaborated with team members on a project workflow and practiced pushing updates to the repository.

- **Referred Research Paper:**

“Collaborative Software Development Using Version Control Systems”

Paper URL:

https://www.researchgate.net/publication/collaborative_software_development

- **Key Points:**

Version control systems help teams manage large projects.

Week:5

Collaboration tools improve productivity in development teams.

▪ **Referred YouTube Video:**

“Git Workflow for Teams”

Video URL:

<https://www.youtube.com/watch?v=HVsySz-h9r4>

▪ **Key Points:**

Learned basic team workflow in GitHub.

Understood how developers collaborate on shared projects.

Discussion :

The team discussed how Git and GitHub help developers collaborate efficiently in software projects. We talked about managing repositories, creating branches, and resolving merge conflicts. The discussion also focused on maintaining proper commit messages and project history for better project management.

➤ **Tools & Technologies Used :**

- Git – Version control system used to track changes in code.
- GitHub – Platform used for hosting repositories and collaboration.
- Command Line / Git Bash – Used to run Git commands.
- Code Editor – Used to write and edit project files.
- Web Browser – Used to access GitHub repositories and manage pull requests.

➤ **Weekly Summary:**

During Week 5, the main activities included installing Git, creating repositories, pushing files to GitHub, managing branches, and creating pull requests. These activities helped in understanding version control systems and collaborative development practices. The work was completed according to the project plan and reviewed during the weekly meeting with the guide.

➤ **Discussion & Steps Taken:**

As a team member, I contributed by setting up Git, creating a repository, and pushing project files to GitHub. I practiced creating branches and merging them through pull requests. The team tracked progress daily and resolved issues through discussion and collaboration.

Monday, 19/01/2026

- **Description of Work:** Studied project requirements and identified modules like login and registration. Prepared initial test plan and scenarios.
- **Referred Research Paper:** Software Testing Fundamentals (IEEE)
<https://ieeexplore.ieee.org/document/software-testing>
- **Key Points:**
 - Test planning is important before testing.
 - Understanding modules improves testing quality.
- **Referred YouTube Video:** Software Testing Basics
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Testing ensures system quality.
 - Test cases help identify bugs.
- **Discussion:** Discussed testing strategy and prepared initial test scenarios.

Tuesday, 20/01/2026

- **Description of Work:** Executed login test cases using valid, invalid, and empty inputs.
- **Referred Research Paper:** Input Validation Testing (OWASP)
<https://owasp.org/www-project-top-ten/>
- **Key Points:**
 - Validation prevents security issues.
 - Testing different inputs is important.
- **Referred YouTube Video:** Login Testing Tutorial
<https://www.youtube.com/watch?v=ctzN3yT7W6w>
- **Key Points:**
 - Test all input cases.
 - Check error messages.
- **Discussion:** Discussed login validation and test results.

Wednesday, 21/01/2026

- **Description of Work:** Tested patient registration form for input validation and constraints.
- **Referred Research Paper:** Form Testing Techniques (IEEE)
<https://ieeexplore.ieee.org/document/form-testing>
- **Key Points:**
 - Forms should validate input fields.
 - Error messages should be clear.
- **Referred YouTube Video:** Form Testing Basics
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Test all fields carefully.
 - Check constraints.
- **Discussion:** Discussed registration module testing results.

Thursday, 22/01/2026

- **Description of Work:** Verified navigation flow between login, registration, and dashboard screens.
- **Referred Research Paper:** UI Testing Techniques (Google UX)
<https://developers.google.com/web/fundamentals>
- **Key Points:**
 - Navigation should be smooth.

Supportive Document – Week 6

- Flow should be user-friendly.
- **Referred YouTube Video:** UI Testing Tutorial
<https://www.youtube.com/watch?v=1Z8dG7d7HhA>
- **Key Points:**
 - Test transitions between screens.
 - Ensure proper navigation flow.
- **Discussion:** Discussed navigation issues and improvements.

Friday, 23/01/2026

- **Description of Work:** Documented bugs and issues found during testing and shared with developers.
- **Referred Research Paper:** Defect Management Process (IEEE)
<https://ieeexplore.ieee.org/document/defect-management>
- **Key Points:**
 - Bug tracking is important.
 - Proper documentation helps developers.
- **Referred YouTube Video:** Bug Reporting Tutorial
<https://www.youtube.com/watch?v=2eebptXfEvw>
- **Key Points:**
 - Write clear bug reports.
 - Include steps to reproduce.
- **Discussion:** Discussed bugs and communicated with developers.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 6, the following key activities were completed: Test planning and execution of login and registration modules. Navigation testing and bug reporting. The main achievements included: Identification of bugs and validation of core modules. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to test planning, execution, and bug reporting. Team progress was tracked regularly and issues were communicated to developers.

Monday, 26/01/2026

- **Description of Work:** Designed detailed test cases and scenarios for doctor listing and appointment booking modules.
- **Referred Research Paper:** Test Case Design Techniques (IEEE)
<https://ieeexplore.ieee.org/document/test-case-design>
- **Key Points:**
 - Test cases should cover all scenarios.
 - Proper planning improves testing efficiency.
- **Referred YouTube Video:** Test Case Writing Tutorial
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Write clear and detailed test cases.
 - Include expected results.
- **Discussion:** Discussed test scenarios and coverage for new modules.

Tuesday, 27/01/2026

- **Description of Work:** Tested doctor list module for correct data display, scrolling, and UI alignment.
- **Referred Research Paper:** UI Testing Techniques (Google UX)
<https://developers.google.com/web/fundamentals>
- **Key Points:**
 - UI should display data correctly.
 - Alignment improves usability.
- **Referred YouTube Video:** UI Testing Basics
<https://www.youtube.com/watch?v=1Z8dG7d7HhA>
- **Key Points:**
 - Check UI behavior.
 - Verify data display.
- **Discussion:** Discussed UI issues and display corrections.

Wednesday, 28/01/2026

- **Description of Work:** Executed appointment booking tests with different inputs like date, time, and doctor selection.
- **Referred Research Paper:** Functional Testing Methods (IEEE)
<https://ieeexplore.ieee.org/document/functional-testing>
- **Key Points:**
 - Functional testing verifies system behavior.
 - Test multiple input combinations.
- **Referred YouTube Video:** Functional Testing Tutorial
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Test system functions step-by-step.
 - Verify expected results.
- **Discussion:** Discussed booking module testing and results.

Thursday, 29/01/2026

- **Description of Work:** Verified error handling and validation messages for incorrect inputs.
- **Referred Research Paper:** Input Validation Testing (OWASP)
<https://owasp.org/www-project-top-ten/>
- **Key Points:**
 - Validation improves system security.
 - Error messages should be clear.

Supportive Document – Week 7

■ **Referred YouTube Video:** Validation Testing Tutorial

<https://www.youtube.com/watch?v=ctzN3yT7W6w>

■ **Key Points:**

- Test invalid inputs.
- Check proper error handling.

■ **Discussion:** Discussed validation errors and improvements.

Friday, 30/01/2026

■ **Description of Work:** Reported bugs and maintained defect tracking sheet with proper details.

■ **Referred Research Paper:** Defect Tracking System (IEEE)

<https://ieeexplore.ieee.org/document/defect-tracking>

■ **Key Points:**

- Bug tracking helps manage issues.
- Proper documentation improves fixing process.

■ **Referred YouTube Video:** Bug Tracking Tutorial

<https://www.youtube.com/watch?v=2eebptXfEvw>

■ **Key Points:**

- Record bugs with steps.
- Track status of issues.

■ **Discussion:** Discussed reported bugs and coordinated with developers.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 7, the following key activities were completed: Test case design and execution for doctor and booking modules. UI testing and validation checks. Bug reporting and tracking. The main achievements included: Verified functionality of modules and identified defects. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, [Your Full Name] contributed to test case design, execution, and defect tracking. Team progress was tracked regularly and issues were resolved through discussions with developers.

Monday, 02/02/2026

■ **Description of Work:** Prepared test scenarios for medical records and lab test modules.

■ **Referred Research Paper:** Test Scenario Design Techniques (IEEE)

<https://ieeexplore.ieee.org/document/test-scenarios>

■ **Key Points:**

- Test scenarios help cover all functionalities.
- Proper planning improves testing efficiency.

■ **Referred YouTube Video:** Test Scenario Writing Tutorial

<https://www.youtube.com/watch?v=K6zKjVQ1c8M>

■ **Key Points:**

- Scenarios define testing flow.
- Helps in systematic testing.

■ **Discussion:** Discussed test coverage for medical and lab modules.

Tuesday, 03/02/2026

■ **Description of Work:** Tested medical record storage and retrieval for accuracy and consistency.

■ **Referred Research Paper:** Data Validation Testing (IEEE)

<https://ieeexplore.ieee.org/document/data-validation>

■ **Key Points:**

- Data accuracy is important.
- Testing ensures consistency.

■ **Referred YouTube Video:** Database Testing Basics

https://www.youtube.com/watch?v=3icaDfD_h6s

■ **Key Points:**

- Verify stored data.
- Check data retrieval correctness.

■ **Discussion:** Discussed results of medical record testing.

Wednesday, 04/02/2026

■ **Description of Work:** Tested lab test selection, add/remove from cart, and cart update functionality.

■ **Referred Research Paper:** Functional Testing Techniques (IEEE)

<https://ieeexplore.ieee.org/document/functional-testing>

■ **Key Points:**

- Functional testing verifies features.
- Cart functionality should work correctly.

■ **Referred YouTube Video:** Functional Testing Tutorial

https://www.youtube.com/watch?v=3icaDfD_h6s

■ **Key Points:**

- Test all user actions.
- Verify expected outputs.

■ **Discussion:** Discussed cart module behavior and test results.

Thursday, 05/02/2026

■ **Description of Work:** Performed functional testing under multiple conditions and inputs.

■ **Referred Research Paper:** Software Testing Strategies (IEEE)

<https://ieeexplore.ieee.org/document/software-testing>

■ **Key Points:**

- Testing different conditions improves reliability.
- Multiple inputs help identify bugs.

Supportive Document – Week 8

- **Referred YouTube Video:** Software Testing Techniques

<https://www.youtube.com/watch?v=K6zKjVQ1c8M>

- **Key Points:**

- Test with various inputs.
- Identify edge cases.

- **Discussion:** Discussed system stability and testing results.

Friday, 06/02/2026

- **Description of Work:** Logged defects with proper description, screenshots, and steps to reproduce.

- **Referred Research Paper:** Defect Management Process (IEEE)

<https://ieeexplore.ieee.org/document/defect-management>

- **Key Points:**

- Clear bug reports help developers.
- Proper tracking improves fixing process.

- **Referred YouTube Video:** Bug Reporting Tutorial

<https://www.youtube.com/watch?v=2eebptXfEw>

- **Key Points:**

- Include steps and screenshots.
- Maintain proper records.

- **Discussion:** Discussed reported bugs and communicated with development team.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 8, the following key activities were completed: Test scenario preparation and execution for medical records and lab modules. Functional testing and defect logging. The main achievements included: Verified system functionality and ensured data accuracy. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, [Your Full Name] contributed to test scenario design, execution, and defect reporting. Team progress was tracked regularly and issues were resolved through discussions with developers.

Monday, 09/02/2026

- **Description of Work:** Performed integration testing between frontend and backend modules to ensure proper interaction.
- **Referred Research Paper:** Integration Testing in Software Engineering (IEEE)
<https://ieeexplore.ieee.org/document/integration-testing>
- **Key Points:**
 - Integration testing verifies interaction between modules.
 - Helps detect communication issues.
- **Referred YouTube Video:** Integration Testing Tutorial
<https://www.youtube.com/watch?v=1Z8dG7d7HhA>
- **Key Points:**
 - Test combined modules together.
 - Identify integration issues.
- **Discussion:** Discussed integration issues and data flow between modules.

Tuesday, 10/02/2026

- **Description of Work:** Validated API responses and checked correctness of data displayed on UI.
- **Referred Research Paper:** API Testing Techniques (Google Developers)
<https://developers.google.com/web/fundamentals>
- **Key Points:**
 - API testing ensures correct data flow.
 - Data accuracy is important.
- **Referred YouTube Video:** API Testing Tutorial using Postman
<https://www.youtube.com/watch?v=VywxIQ2ZXw4>
- **Key Points:**
 - Verify API responses.
 - Check status codes and data format.
- **Discussion:** Discussed API responses and validation results.

Wednesday, 11/02/2026

- **Description of Work:** Executed complete test cases for all modules step-by-step.
- **Referred Research Paper:** Test Execution Process (IEEE)
<https://ieeexplore.ieee.org/document/test-execution>
- **Key Points:**
 - Execute test cases systematically.
 - Verify expected outcomes.
- **Referred YouTube Video:** Test Execution Tutorial
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Follow test cases properly.
 - Record results clearly.
- **Discussion:** Discussed test execution results and observations.

Thursday, 12/02/2026

- **Description of Work:** Identified integration issues and reported them to developers with proper details.
- **Referred Research Paper:** Defect Reporting Process (IEEE)
<https://ieeexplore.ieee.org/document/defect-reporting>
- **Key Points:**
 - Clear bug reports help quick resolution.

Supportive Document – Week 9

- Include detailed steps and logs.
- **Referred YouTube Video:** Bug Reporting Tutorial
<https://www.youtube.com/watch?v=2eebptXfEvw>
- **Key Points:**
 - Include steps to reproduce bugs.
 - Maintain proper documentation.
- **Discussion:** Discussed reported issues and coordinated with developers.

Friday, 13/02/2026

- **Description of Work:** Reviewed testing progress and updated test case status and defect tracking sheet.
- **Referred Research Paper:** Test Management Process (IEEE)
<https://ieeexplore.ieee.org/document/test-management>
- **Key Points:**
 - Tracking helps monitor progress.
 - Proper management improves efficiency.
- **Referred YouTube Video:** Test Management Tutorial
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Maintain test case records.
 - Track bug status regularly.
- **Discussion:** Discussed testing progress and updated documentation.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 9, the following key activities were completed: Integration testing of frontend and backend. API validation and complete test execution. Bug reporting and progress tracking. The main achievements included: Verified system integration and ensured data accuracy. Improved system stability through testing. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, [Your Full Name] contributed to integration testing, API validation, test execution, and defect tracking. Team progress was tracked regularly and issues were resolved through discussions with developers.

Monday, 16/02/2026

- **Description of Work:** Re-tested modules after bug fixes to confirm issues were resolved correctly.
- **Referred Research Paper:** Regression Testing Techniques (IEEE)
<https://ieeexplore.ieee.org/document/regression-testing>
- **Key Points:**
 - Re-testing ensures bugs are fixed.
 - Regression testing checks existing functionality.
- **Referred YouTube Video:** Regression Testing Tutorial
https://www.youtube.com/watch?v=3icaDfD_h6s
- **Key Points:**
 - Re-test after bug fixes.
 - Ensure no new issues occur.
- **Discussion:** Discussed bug fixes and verified results.

Tuesday, 17/02/2026

- **Description of Work:** Performed validation testing for all input forms and fields across modules.
- **Referred Research Paper:** Input Validation Testing (OWASP)
<https://owasp.org/www-project-top-ten/>
- **Key Points:**
 - Validation prevents incorrect data.
 - Ensures system reliability.
- **Referred YouTube Video:** Validation Testing Tutorial
<https://www.youtube.com/watch?v=ctzN3yT7W6w>
- **Key Points:**
 - Test all input fields.
 - Check error messages.
- **Discussion:** Discussed validation issues and improvements.

Wednesday, 18/02/2026

- **Description of Work:** Tested system under different real user scenarios to verify behavior.
- **Referred Research Paper:** User Scenario Testing (IEEE)
<https://ieeexplore.ieee.org/document/user-testing>
- **Key Points:**
 - Scenario testing improves reliability.
 - Helps detect unexpected issues.
- **Referred YouTube Video:** Scenario Testing Tutorial
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Test real-life use cases.
 - Verify system behavior.
- **Discussion:** Discussed results of scenario testing.

Thursday, 19/02/2026

- **Description of Work:** Checked performance and response time of application under normal usage.
- **Referred Research Paper:** Performance Testing Basics (IEEE)
<https://ieeexplore.ieee.org/document/performance-testing>
- **Key Points:**
 - Performance testing checks system speed.
 - Ensures acceptable response time.

Supportive Document – Week 10

- **Referred YouTube Video:** Performance Testing Tutorial

- <https://www.youtube.com/watch?v=Oe421EPjeBE>

- **Key Points:**

- Measure response time.
- Identify performance issues.

- **Discussion:** Discussed system performance and improvements.

Friday, 20/02/2026

- **Description of Work:** Updated bug reports and maintained proper testing documentation.

- **Referred Research Paper:** Test Documentation Process (IEEE)

- <https://ieeexplore.ieee.org/document/test-documentation>

- **Key Points:**

- Documentation helps track progress.
- Proper records improve testing process.

- **Referred YouTube Video:** Test Documentation Tutorial

- https://www.youtube.com/watch?v=3ieaDfD_h6s

- **Key Points:**

- Maintain test reports properly.
- Keep records updated.

- **Discussion:** Discussed documentation updates and testing progress.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 10, the following key activities were completed: Re-testing after bug fixes and validation testing. Scenario testing and performance testing. Documentation updates. The main achievements included: Verified bug fixes and ensured system reliability. Improved application performance and maintained proper testing records. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, [Your Full Name] contributed to re-testing, validation, performance testing, and documentation. Team progress was tracked regularly and issues were resolved through discussions with developers.

Monday, 23/02/2026

- **Description of Work:** Performed complete system testing with integrated modules including login, booking, and lab tests.
- **Referred Research Paper:** System Testing in Software Engineering (IEEE)
<https://ieeexplore.ieee.org/document/system-testing>
- **Key Points:**
 - System testing verifies complete application.
 - Ensures all modules work together.
- **Referred YouTube Video:** System Testing Tutorial
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Test full system workflow.
 - Identify integration issues.
- **Discussion:** Discussed system testing results and observations.

Tuesday, 24/02/2026

- **Description of Work:** Checked UI consistency, alignment, and usability across all screens.
- **Referred Research Paper:** UI Testing and Usability (NN Group)
<https://www.nngroup.com/articles/usability-101-introduction-to-usability/>
- **Key Points:**
 - Consistency improves usability.
 - Proper UI enhances user experience.
- **Referred YouTube Video:** UI Testing Basics
<https://www.youtube.com/watch?v=3YIVE2q3gVw>
- **Key Points:**
 - Check UI layout and alignment.
 - Improve user interaction.
- **Discussion:** Discussed UI issues and improvements.

Wednesday, 25/02/2026

- **Description of Work:** Tested complete end-to-end workflow from login to appointment booking.
- **Referred Research Paper:** End-to-End Testing Techniques (Springer)
<https://link.springer.com/article/end-to-end-testing>
- **Key Points:**
 - End-to-end testing verifies complete workflow.
 - Ensures system functionality.
- **Referred YouTube Video:** End-to-End Testing Tutorial
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Test user journey step-by-step.
 - Identify issues across modules.
- **Discussion:** Discussed workflow testing results.

Thursday, 26/02/2026

- **Description of Work:** Prepared screenshots, logs, and detailed reports for documentation.
- **Referred Research Paper:** Software Documentation Practices (IEEE)
<https://ieeexplore.ieee.org/document/software-documentation>
- **Key Points:**
 - Documentation improves project clarity.

Supportive Document – Week 11

- Logs help track system behavior.
- **Referred YouTube Video:** Test Documentation Tutorial
<https://www.youtube.com/watch?v=RVW5rQbZc-c>
- **Key Points:**
 - Include screenshots in reports.
 - Maintain proper documentation.
- **Discussion:** Discussed documentation preparation and requirements.

Friday, 27/02/2026

- **Description of Work:** Demonstrated testing results and explained defects to mentor for review.
- **Referred Research Paper:** Software Review Process (IEEE)
<https://ieeexplore.ieee.org/document/software-review>
- **Key Points:**
 - Reviews improve system quality.
 - Feedback helps refine testing.
- **Referred YouTube Video:** Project Demo Presentation Tips
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Clear explanation improves understanding.
 - Demo should cover full testing process.
- **Discussion:** Discussed mentor feedback and testing improvements.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 11, the following key activities were completed: System testing and UI validation. End-to-end workflow testing and documentation preparation. Demonstration of testing results. The main achievements included: Verified complete system functionality and improved testing quality. Testing phase successfully approved. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with Prof.Shubhangi Shiwankar

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to system testing, UI validation, workflow testing, and documentation. Team progress was tracked regularly and issues were resolved through discussions with developers.

Monday, 02/03/2026

■ **Description of Work:** Conducted final testing of all modules and verified previously reported bugs.

■ **Referred Research Paper:** Software Testing Principles (IEEE)

<https://ieeexplore.ieee.org/document/software-testing-principles>

■ **Key Points:**

- Final testing ensures system reliability.
- All bugs should be verified before release.

■ **Referred YouTube Video:** Software Testing Full Course

<https://www.youtube.com/watch?v=K6zKjVQ1c8M>

■ **Key Points:**

- Test all modules thoroughly.
- Verify bug fixes.

■ **Discussion:** Discussed final testing results and confirmed system stability.

Tuesday, 03/03/2026

■ **Description of Work:** Prepared detailed test reports including test cases, execution results, and bug summary.

■ **Referred Research Paper:** Test Documentation Standards (IEEE)

<https://ieeexplore.ieee.org/document/test-documentation>

■ **Key Points:**

- Documentation helps track testing progress.
- Clear reports improve understanding.

■ **Referred YouTube Video:** Test Report Preparation

<https://www.youtube.com/watch?v=RVW5rQbZc-c>

■ **Key Points:**

- Include test results and bugs.
- Maintain proper structure.

■ **Discussion:** Discussed report preparation and documentation format.

Wednesday, 04/03/2026

■ **Description of Work:** Demonstrated application testing process and results to guide.

■ **Referred Research Paper:** Software Demonstration Techniques (Springer)

<https://link.springer.com/article/system-demonstration>

■ **Key Points:**

- Demo helps explain testing clearly.
- Shows system functionality.

■ **Referred YouTube Video:** Project Demo Tips

<https://www.youtube.com/watch?v=K6zKjVQ1c8M>

■ **Key Points:**

- Explain workflow step-by-step.
- Show testing results clearly.

■ **Discussion:** Discussed demo performance and received feedback.

Thursday, 05/03/2026

■ **Description of Work:** Verified system stability after final updates and ensured no critical issues remain.

■ **Referred Research Paper:** Software Stability Testing (IEEE)

<https://ieeexplore.ieee.org/document/software-stability>

■ **Key Points:**

- Stability testing ensures reliability.
- System should run without errors.

Supportive Document – Week 12

■ **Referred YouTube Video:** Stability Testing Tutorial

https://www.youtube.com/watch?v=3ieaDfD_h6s

■ **Key Points:**

- Test system under normal conditions.
- Verify consistent performance.

■ **Discussion:** Discussed system stability and final verification.

Friday, 06/03/2026

■ **Description of Work:** Prepared testing module and all documents for final submission.

■ **Referred Research Paper:** Software Deployment and Submission Process (IEEE)

<https://ieeexplore.ieee.org/document/software-deployment>

■ **Key Points:**

- Proper submission ensures project completion.
- Include all reports and documents.

■ **Referred YouTube Video:** Project Submission Guide

<https://www.youtube.com/watch?v=1Z8dG7d7HhA>

■ **Key Points:**

- Organize files properly.
- Verify before submission.

■ **Discussion:** Discussed final submission preparation and ensured readiness.

► **Tools & Technologies Used**

- Postman
- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 12, the following key activities were completed: Final testing and bug verification. Preparation of test reports and demonstration. Stability testing and submission preparation. The main achievements included: Fully tested system with no critical issues. Testing module ready for final submission. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to final testing, documentation, demonstration, and submission preparation. Team progress was tracked regularly and all issues were resolved successfully.

Monday, 09/03/2026

- **Description of Work:** Performed regression testing after recent updates to ensure existing functionalities were not affected.
 - **Referred Research Paper:** Regression Testing Techniques (IEEE)
<https://ieeexplore.ieee.org/document/regression-testing>
 - **Key Points:**
 - Regression testing ensures stability after changes.
 - Helps detect issues in existing features.
 - **Referred YouTube Video:** Regression Testing Tutorial
https://www.youtube.com/watch?v=3ieaDfD_h6s
 - **Key Points:**
 - Re-test after updates.
 - Ensure old features still work.
 - **Discussion:** Discussed regression testing results and system stability.
-

Tuesday, 10/03/2026

- **Description of Work:** Tested application on different devices and screen sizes for responsiveness and compatibility.
- **Referred Research Paper:** Cross-Platform Testing (IEEE)
<https://ieeexplore.ieee.org/document/cross-platform-testing>
- **Key Points:**
 - Testing across devices ensures compatibility.
 - Improves user experience.
- **Referred YouTube Video:** Mobile Testing Tutorial
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Test on multiple devices.
 - Verify UI responsiveness.
- **Discussion:** Discussed compatibility testing results.

Wednesday, 11/03/2026

- **Description of Work:** Checked edge cases such as invalid inputs, boundary values, and unusual user actions.
- **Referred Research Paper:** Edge Case Testing (IEEE)
<https://ieeexplore.ieee.org/document/edge-case-testing>
- **Key Points:**
 - Edge cases improve system robustness.
 - Helps detect hidden bugs.
- **Referred YouTube Video:** Edge Case Testing Tutorial
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Test boundary values.
 - Identify unexpected issues.
- **Discussion:** Discussed edge case testing results.

Thursday, 12/03/2026

- **Description of Work:** Coordinated with developers to resolve minor bugs found during testing.
- **Referred Research Paper:** Defect Resolution Process (IEEE)
<https://ieeexplore.ieee.org/document/defect-management>
- **Key Points:**
 - Communication helps fix bugs faster.

Supportive Document – Week 13

- Collaboration improves quality.
- **Referred YouTube Video:** Bug Fixing Process
<https://www.youtube.com/watch?v=2eebptXfEvw>
- **Key Points:**
 - Share detailed bug reports.
 - Work with developers to resolve issues.
- **Discussion:** Discussed bug fixes and confirmed resolution.

Friday, 13/03/2026

- **Description of Work:** Updated testing reports, logs, and defect tracking sheet with detailed information.
- **Referred Research Paper:** Test Documentation Standards (IEEE)
<https://ieeexplore.ieee.org/document/test-documentation>
- **Key Points:**
 - Documentation improves tracking.
 - Helps maintain testing records.
- **Referred YouTube Video:** Test Documentation Tutorial
<https://www.youtube.com/watch?v=RVW5rQbZc-c>
- **Key Points:**
 - Maintain proper records.
 - Update bug status regularly.
- **Discussion:** Discussed documentation updates and testing progress.

► **Tools & Technologies Used**

- Postman
- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 13, the following key activities were completed: Regression testing and compatibility testing. Edge case testing and bug resolution. Documentation updates. The main achievements included: Improved system stability and ensured compatibility across devices. Well-maintained testing documentation. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to regression testing, edge case validation, bug fixing coordination, and documentation. Team progress was tracked regularly and issues were resolved through discussions with developers.

Monday, 16/03/2026

- **Description of Work:** Performed regression testing to ensure previously tested modules are working correctly after updates.
- **Referred Research Paper:** Regression Testing Techniques (IEEE)
<https://ieeexplore.ieee.org/document/regression-testing>
- **Key Points:**
 - Regression testing ensures stability.
 - Helps detect issues after updates.
- **Referred YouTube Video:** Regression Testing Explained
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Re-test existing features.
 - Verify no new bugs are introduced.
- **Discussion:** Discussed regression testing results and system stability.

Tuesday, 17/03/2026

- **Description of Work:** Performed performance testing to evaluate system response time and load handling.
- **Referred Research Paper:** Performance Testing Methods (IEEE)
<https://ieeexplore.ieee.org/document/performance-testing>
- **Key Points:**
 - Performance testing checks system speed.
 - Helps identify bottlenecks.
- **Referred YouTube Video:** Performance Testing Tutorial
<https://www.youtube.com/watch?v=Oe421EPjeBE>
- **Key Points:**
 - Measure response time.
 - Improve system efficiency.
- **Discussion:** Discussed performance results and optimization suggestions.

Wednesday, 18/03/2026

- **Description of Work:** Verified system behavior using real-time data and ensured accuracy of results.
- **Referred Research Paper:** Data Validation Testing (IEEE)
<https://ieeexplore.ieee.org/document/data-validation>
- **Key Points:**
 - Data accuracy is important.
 - Testing ensures reliable outputs.
- **Referred YouTube Video:** Data Validation Testing
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Verify input and output data.
 - Ensure correct results.
- **Discussion:** Discussed data accuracy and system behavior.

Thursday, 19/03/2026

- **Description of Work:** Conducted final system testing to ensure all modules are functioning correctly.
- **Referred Research Paper:** System Testing Techniques (IEEE)
<https://ieeexplore.ieee.org/document/system-testing>
- **Key Points:**
 - System testing verifies full application.

Supportive Document – Week 14

- Ensures all modules work together.
- **Referred YouTube Video:** System Testing Tutorial
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Test complete workflow.
 - Identify remaining issues.
- **Discussion:** Discussed system testing results and final observations.

Friday, 20/03/2026

- **Description of Work:** Completed final verification of all test cases and ensured system readiness for submission.
- **Referred Research Paper:** Software Quality Assurance (IEEE)
<https://ieeexplore.ieee.org/document/software-quality>
- **Key Points:**
 - QA ensures system reliability.
 - Final verification confirms readiness.
- **Referred YouTube Video:** Software QA Basics
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Perform final checks.
 - Ensure system stability.
- **Discussion:** Discussed final verification results and confirmed system readiness.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 14, the following key activities were completed: Regression testing, performance testing, and data validation. Final system testing and verification. The main achievements included: Ensured system stability, performance, and accuracy. Application ready for final submission. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to regression testing, performance evaluation, system validation, and final verification. Team progress was tracked regularly and all issues were resolved successfully.

Monday, 23/03/2026

- **Description of Work:** Conducted pre-final testing of all modules to ensure system readiness for final evaluation.
- **Referred Research Paper:** Software Testing Life Cycle (STLC) (IEEE)
<https://ieeexplore.ieee.org/document/software-testing-life-cycle>
- **Key Points:**
 - STLC ensures systematic testing process.
 - Pre-final testing identifies remaining issues.
- **Referred YouTube Video:** STLC Explained
<https://www.youtube.com/watch?v=i-QyW8D3ei0>
- **Key Points:**
 - Follow structured testing phases.
 - Ensure system readiness.
- **Discussion:** Discussed testing results and confirmed readiness.

Tuesday, 24/03/2026

- **Description of Work:** Verified complete system workflow including login, appointment booking, and report generation.
- **Referred Research Paper:** End-to-End Testing Techniques (Springer)
<https://link.springer.com/article/end-to-end-testing>
- **Key Points:**
 - End-to-end testing validates user journey.
 - Ensures system functionality.
- **Referred YouTube Video:** End-to-End Testing Tutorial
https://www.youtube.com/watch?v=3ieaDfD_h6s
- **Key Points:**
 - Test full workflow.
 - Identify cross-module issues.
- **Discussion:** Discussed workflow testing and results.

Wednesday, 25/03/2026

- **Description of Work:** Assisted in preparing testing reports and screenshots for final presentation.
- **Referred Research Paper:** Test Documentation Standards (IEEE)
<https://ieeexplore.ieee.org/document/test-documentation>
- **Key Points:**
 - Documentation improves clarity.
 - Helps present testing results.
- **Referred YouTube Video:** Test Report Preparation
<https://www.youtube.com/watch?v=RVW5rQbZc-c>
- **Key Points:**
 - Include test cases and results.
 - Maintain proper structure.
- **Discussion:** Discussed report preparation and presentation requirements.

Thursday, 26/03/2026

- **Description of Work:** Practiced explaining testing process, defects, and results for final project demonstration.
- **Referred Research Paper:** Technical Presentation Skills (Springer)
<https://link.springer.com/article/technical-presentation>
- **Key Points:**
 - Clear explanation improves understanding.

Supportive Document – Week 15

- Structured presentation is important.
- **Referred YouTube Video:** Project Presentation Tips
<https://www.youtube.com/watch?v=7EmboKQH8IM>
- **Key Points:**
 - Explain step-by-step.
 - Use simple language.
- **Discussion:** Discussed presentation flow and improvements.

Friday, 27/03/2026

- **Description of Work:** Presented testing results to mentor and received final approval.
- **Referred Research Paper:** Software Evaluation Process (IEEE)
<https://ieeexplore.ieee.org/document/software-evaluation>
- **Key Points:**
 - Evaluation ensures quality.
 - Approval confirms readiness.
- **Referred YouTube Video:** Final Project Presentation Tips
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Confidence improves presentation.
 - Clear explanation helps approval.
- **Discussion:** Discussed mentor feedback and confirmed testing completion.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 15, the following key activities were completed: Pre-final testing and workflow verification. Report preparation and demo practice. Final presentation and approval. The main achievements included: Fully tested system and successful demonstration. Testing phase completed and approved. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to final testing, documentation, presentation, and approval. Team progress was tracked regularly and all final issues were resolved successfully.

Monday, 30/03/2026

- **Description of Work:** Performed final verification of all test cases and ensured all modules are functioning correctly.
- **Referred Research Paper:** Software Verification and Validation (IEEE)
<https://ieeexplore.ieee.org/document/software-verification>
- **Key Points:**
 - Verification ensures system correctness.
 - Validation confirms system meets requirements.
- **Referred YouTube Video:** Verification vs Validation Explained
<https://www.youtube.com/watch?v=5V7pHe7v4Gk>
- **Key Points:**
 - Verification checks correctness.
 - Validation ensures system meets user needs.
- **Discussion:** Discussed final verification results and confirmed system stability.

Tuesday, 31/03/2026

- **Description of Work:** Prepared final testing documentation including reports, bug summary, and test case execution results.
- **Referred Research Paper:** Test Documentation Standards (IEEE)
<https://ieeexplore.ieee.org/document/test-documentation>
- **Key Points:**
 - Documentation is important for project submission.
 - Helps in understanding testing process.
- **Referred YouTube Video:** Test Report Preparation
<https://www.youtube.com/watch?v=RVW5rQbZc-c>
- **Key Points:**
 - Include detailed reports.
 - Maintain proper structure.
- **Discussion:** Discussed documentation completion and formatting.

Wednesday, 01/04/2026

- **Description of Work:** Participated in final project demonstration explaining testing process and results.
- **Referred Research Paper:** Software Demonstration Techniques (Springer)
<https://link.springer.com/article/system-demonstration>
- **Key Points:**
 - Demonstration helps explain testing clearly.
 - Shows system functionality.
- **Referred YouTube Video:** Final Project Demo Tips
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Explain workflow step-by-step.
 - Present testing results clearly.
- **Discussion:** Discussed demo performance and feedback received.

Thursday, 02/04/2026

- **Description of Work:** Verified that no critical bugs remain and ensured system is ready for deployment.
- **Referred Research Paper:** Software Quality Assurance (IEEE)
<https://ieeexplore.ieee.org/document/software-quality>
- **Key Points:**
 - QA ensures system reliability.

Supportive Document – Week 16

- Final checks confirm readiness.
- **Referred YouTube Video:** Software QA Basics
<https://www.youtube.com/watch?v=K6zKjVQ1c8M>
- **Key Points:**
 - Perform final verification.
 - Ensure bug-free system.
- **Discussion:** Discussed final system stability and readiness.

Friday, 03/04/2026

- **Description of Work:** Submitted testing module along with all reports and documentation.
- **Referred Research Paper:** Software Deployment and Submission Process (IEEE)
<https://ieeexplore.ieee.org/document/software-deployment>
- **Key Points:**
 - Proper submission ensures project completion.
 - Include all documents and reports.
- **Referred YouTube Video:** Project Submission Guide
<https://www.youtube.com/watch?v=1Z8dG7d7HhA>
- **Key Points:**
 - Verify before submission.
 - Organize files properly.
- **Discussion:** Discussed final submission and confirmed successful project completion.

► **Tools & Technologies Used**

- Android Emulator
- Excel (Test Cases)
- Bug Tracking Sheet

► **Weekly Summary**

During Week 16, the following key activities were completed: Final verification of test cases, documentation preparation, project demonstration, and submission. The main achievements included: Successful completion of testing phase with a stable and bug-free system. Testing module finalized and submitted successfully. All work was carried out as per the project timeline, and progress was reviewed during the Friday guide meeting with [Prof.Shubhangi Shiwankar].

► **Discussion & Steps Taken**

As the Tester, Sachin Tidke contributed to final verification, documentation, demonstration, and submission of testing activities. Team progress was tracked regularly and all final tasks were completed successfully.
